ABOUT ME

My name is Luciano Perez, and I am a Fullstack Developer at Ensolvers, specializing in technologies such as Java with Spring Boot and React with TypeScript. I am currently in my third year of pursuing a Bachelor's degree in Systems at Universidad Nacional de Lanus. I am a dedicated individual committed to continuous learning and constant personal and professional growth, always focusing on improving my skills in every project I take part in.

PROFESSIONAL EXPERIENCE

Fullstack Developer
Ensolvers   April 2024 - Current

- Development and optimization of functionalities in the Hyros project, focusing on scalability and improving user experience.
- Specialization in Java with Spring Boot for the backend and React/TypeScript for the frontend, achieving robust and scalable implementations.
- Management, refactoring, and migration of functionalities to modern practices, enhancing code performance and maintainability.
- Implementation of integrations with APIs and external services, expanding the application's capabilities and reach.
- Active collaboration with design and analysis teams to align developments with client needs, ensuring effective and user-focused solutions.

Functional Analyst
Voolkia Software & Services   May 2023 - April 2024

- 'Scraping' Project at Mercado Libre
- Product matching strategies
- Validation and review of products on various platforms
- Collaboration across different functional areas
- Continuous commitment to process improvement and optimization
- Creation and management of documentation

SKILLS

- Java
- Spring Boot
- Hibernate
- MySQL
- AWS

- React
- Typescript
- Linux
- GIT
- Docker

- Proactivity
- Teamwork
- Adaptability
- Problem-solving
- Empathy
- Time management

EDUCATION

Bachelor's Degree in Systems
Universidad Nacional de Lanus   March 2022 - Current

First Certificate in English (Cambridge)
Knightsbridge School of English   March 2012 - June 2021
- B2 Level - Score 174

PROJECTS

Sports Events System

Repository

Technologies: Java, Spring Boot, MySQL, Angular, Typescript, Hibernate, GIT
- Built a Java-based sports event management system with a Spring Boot backend and Angular frontend. Leveraged Hibernate and MySQL for data persistence. Implemented CRUD operations for matches, teams, stadiums, divisions, and cities.

Portfolio

Repository   Deploy

Technologies: HTML, CSS, Javascript
- A website where you can find my projects, and information about my skills and experience.
